Subject : Acceptance of Website Development Proposal

Dear Alina Shaji,

This is to confirm that Eden Food Products accepts your team's proposal to design and develop a free website for our business as part of your Service Learning Project.

We appreciate your initiative and look forward to collaborating with you. We will provide required details and support during the development process.

Warm Regards,
Sibi Mol K
Eden Food Products

NEED ANALYSIS

Visibility & Branding

Customers need an easy place to learn about the company, the founders (women entrepreneurs), and product range.

Sales Channel

Local customers want to place orders online for pickup/delivery — the website enables direct orders and reduces dependence on phone orders.

Trust & Legitimacy

An official site + company letterhead + geotag photos increases trust for B2B and retail buyers.

Product Catalog & Information

Customers need clear product descriptions, prices, and images to choose items.

Payments & Convenience

Integrating Razorpay provides secure, easy payments and enables pre-paid orders.

Operational Efficiency

An admin panel helps the company manage orders, update product availability, and view order history.

Marketing & Growth

A website enables SEO, social sharing, and future integration with local marketplaces or delivery apps.

GEOTAGGED PHOTO

PROBLEM STATEMENT

Eden Food Products needed a modern website to digitally showcase their fresh items like Chapatti, Poori, Parotta, and Idli/Dosa Batter. Their ordering and delivery processes were mostly manual, limiting customer reach and efficiency. A responsive full-stack web based solution was required to improve accessibility and user experience

SDG GOALS

SDG 5 – Gender Equality

Empowers women-led enterprises by providing digital tools that enhance operational efficiency and business visibility.

Supports equitable participation by strengthening the capacity of women entrepreneurs, enabling sustainable economic independence and competitive market presence.

SDG 8 – Decent Work and Economic Growth

Promotes inclusive economic opportunities by developing a scalable digital platform for a small business, improving productivity and operational workflow.

Facilitates sustainable job creation through technology adoption and enhances entrepreneurial growth in local communities.

SDG 9 – Industry, Innovation & Infrastructure Advances digital

innovation by designing a modern web-based system using React, Tailwind, and Express.js to streamline product management, orders, and customer interaction.

Strengthens technological infrastructure for small businesses, enabling data-driven operations and fostering long-term digital transformation.

Methodology (Design & Evaluation)

01

Study Phase

- Understood the company's workflow, product range (Chapatti, Parotta, Poori, Idli/Dosa Batter, Pickles), and business objectives.
- Identified key pain points: manual ordering, no digital presence, lack of customer outreach.
- Conducted on-site visits to observe production, capture geotag photos, and document operations.

03

Development Phase

- Built a responsive website using modern full-stack technologies.
- Developed dynamic Product Pages, Order Flow, and Admin Controls.
- Integrated secure payment workflow using Razorpay (details collected from company).
- Ensured mobile-friendly UI for easy access by regular customers

02

Planning & Design Phase

- Prepared website structure: Homepage, Product Catalog, About, Contact, and Order Flow.
- Designed UI mockups and 15 sample templates for the company to choose from.
- Finalized color theme, layout, and content placement to match the company's brand identity.

04

Evaluation & Deployment Phase

- Tested website for functionality, responsiveness, and error handling.
- Collected feedback from the company on design, product listing, and order flow.
- Updated features based on feedback and prepared the site for final deployment.
- Planned future enhancements (inventory automation, order tracking, delivery integration).

Implementation Progress

Customer Website Fully Designed & Developed

- Built complete frontend using React, HTML5, CSS, Tailwind.
- Added product items, categories (menus), cart, bulk orders & subscription modules.
- Payment options: COD + Razorpay placeholder.
- Implemented delivery area checker using geolocation (50 km radius).
- Added customer reviews, FAQ, owner details & WhatsApp chat widget integration.

Customer Website Fully Designed & Developed

- Built complete frontend using React, HTML5, CSS, Tailwind.
- Added product items, categories (menus), cart, bulk orders & subscription modules.
- Payment options: COD + Razorpay placeholder.
- Implemented delivery area checker using geolocation (50 km radius).
- Added customer reviews, FAQ, owner details & WhatsApp chat widget integration.

- Built complete frontend using React, HTML5, CSS, Tailwind.
- Added product items, categories (menus), cart, bulk orders & subscription modules.
- Payment options: COD + Razorpay placeholder.
- Implemented delivery area checker using geolocation (50 km radius).
- Added customer reviews, FAQ, owner details & WhatsApp chat widget integration.

Implementation Progress

Delivery Check & Geo-Logic Implementation

- Integrated OpenStreetMap Nominatim API for address → coordinates.
- Used Haversine formula to calculate distance from the company to user.
- Automatically validates if delivery is allowed (< 50 km).
- Provides real-time delivery availability to users during checkout.

Ready for Payment Integration & Deployment

- Planned full Razorpay payment gateway integration (test mode + live mode).
- Pre-configured backend routes for online payment processing.
- Preparing for deployment on hosting platforms (Netlify + Render / AWS).
- Next steps include linking domain, improving UI polish & final testing.

Weekly Report Summary

Odd Semester

- Identifying and shortlisting service-learning companies.
- Contacting companies via calls, emails, and field visits.
- Exploring work environments and finalizing Eden Food Products.
- Requirement analysis and project concept finalization.
- UI development using Tailwind CSS & React.
- Building product and cart functionality.
- Starting backend development (Node.js/Express API routes).
- Designing the admin dashboard structure.

Even Semester

- Developing admin dashboard UI and integrating backend APIs.
- Adding login authentication and linking admin features.
- Testing complete order workflow end-to-end.
- Improving UI responsiveness, animations & user experience.
- Preparing final documentation, screenshots, and workflow diagrams.
- Final testing, bug fixing, cross-device checks.
- Deployment readiness and submission preparation.

Conclusion

- Successfully developed a fully functional web application for a women-led small business, integrating product listings, cart features, order management, and admin workflows.
- Demonstrated strong technical competency by building and connecting React-based UI components with Express.js backend APIs, ensuring seamless system performance.
- Enhanced system usability through continuous testing, debugging, responsiveness improvements, and cross-device validation.
- Achieved service-learning objectives by applying technical skills to support community development, improve operational efficiency, and strengthen local entrepreneurship.
- Showcased effective teamwork, structured documentation, and iterative refinement, resulting in a deployment-ready system aligned with academic and community expectations.
